TechnologySharda University

Greater Noida

DECLARATION OF THE STUDENT

I hereby declare that the project entitled is an outcome of our own efforts under the guidance of DR. Hoor Fatima. The project is submitted to the Sharda University for the partial fulfilment of the Bachelor of Technology Examination 2023-24.

We also declare that this project report has not been previously submitted to any other university.

SAKSHAM POKHREL

CERTIFICATE

This is to inform that **SAKSHAM POKHREL** of Sharda University has successfully completed the project work titled **A ROOM RENTAL WEBSITE** in partial fulfilment of the Bachelor of Technology Examination **2023-24** by Sharda University.

This project report is the record of authentic work carried out by them during the period from JUNE 2023 to JULY 2023.

SAKSHAM POKHREL

DR. HOOR FATIMA

Assistant Professor

Prof. (Dr.) Nitin Rakesh

Head-CSE

Acknowledgement

I would like to express my sincere gratitude to all those who have directly or indirectly helped me in completing my project on A Room Rental Website. I would like to thank them for their effective guidance and kind cooperation without which I would not have been able to introduce a good presentation and complete this project.

I would like to extend my sincere gratitude to my mentor Dr. HOOR FATIMA of the department of Computer Engineering for the permission-grant, constant reminders, and much-needed motivation, which helped me to extract maximum knowledge from the available sources, and for their invaluable experience in the domain of the project and constructive criticisms molded my projects and gave me insights as to how to further develop the projects. My experience working, facing obstacles during development, and eventually brainstorming and resolving them have been fruitful. The knowledge I received from everyone, staff and my friends will help me endeavor and prosper in my respective careers and grow in life.

Lastly, I sincerely thanks to all my friends and teachers for their coordination, help and motivation in completion of this project and report.

Abstract

The globalization of education has led to an increase in the number of international students seeking educational opportunities abroad. As these students venture into unfamiliar territories, finding suitable accommodation poses a significant challenge. This abstract presents an innovative room rental website specifically designed to address the unique needs of international students.

The proposed room rental website serves as a comprehensive platform that connects international students with reliable and affordable accommodation options. It offers a user-friendly interface and incorporates advanced search functionalities, enabling students to find suitable rooms based on their preferences, budget, and proximity to educational institutions.

Key features of the room rental website include verified property listings, ensuring the legitimacy and safety of accommodations, and user reviews to facilitate informed decision-making. The platform also provides multilingual support, eliminating language barriers and creating a welcoming environment for international students from diverse cultural backgrounds.

In conclusion, the proposed room rental website fills a crucial gap in the accommodation needs of international students. Through its user-friendly interface, comprehensive services, and emphasis on safety and cultural integration, the platform provides a reliable and efficient solution for students seeking suitable housing options abroad.

Chapter 1: Introductory

1.1Introduction

Students from all over the world have always sought opportunities to study abroad, making the pursuit of education a truly global endeavor. The appeal of studying abroad is not just the academic experience, but also the opportunity to extend horizons and immerse oneself in a new culture. The number of overseas students choosing higher education in various parts of the world has consequently increased significantly.

Finding acceptable housing in the country they are studying in is one of the biggest problems that they confront. Finding a safe and comfortable place to live becomes a key consideration when moving to a new location, especially if it's abroad. conventional techniques of lodging search, such as local.

1.2 Purpose of Study

The purpose of this study is to develop and explore the potential of a room rental website specifically designed for international students. The website aims to provide a convenient and efficient platform for both students seeking accommodation and homeowners offering rooms for rent. By leveraging the power of technology, this website intends to streamline the process of finding suitable housing options for international students, alleviating the stress associated with securing accommodation in a foreign country.

1.3 Object of the Study

1.To understand the specific challenges faced by international students in finding suitable accommodation.

2.To analyze the existing room rental websites and identify their limitations and areas for improvement.

3.To design and develop a user-friendly room rental website tailored to the needs of international students.

4.To evaluate the usability and effectiveness of the developed website through user feedback and testing.

5.To assess the potential impact of the room rental website in facilitating the accommodation search process for international students.

Chapter 2: Literature Review

2.1 Literature Review

This chapter gives a thorough analysis of the relevant literature on the subject of a website that lets overseas students rent rooms. In addition to examining the current state of room rental websites, the evaluation attempts to highlight the difficulties encountered by international students in locating appropriate housing.

2.2 Challenges faced by International Students in finding accommodation.

There is a growing body of literature on the use of room rental websites by international students. These websites can be a valuable resource for students looking for affordable and convenient housing options. However, there are also some potential risks associated with using these websites, such as scams and fraud.

2.3 Community and Support Features

According to one study from the University of California, Irvine, international students were more likely to obtain affordable and practical lodging when they used room rental websites. Additionally, the study discovered that students were less likely to have housing issues like noise or security issues.

Another investigation by the University of Toronto revealed that international students who used websites for room rentals were more likely to be pleased with their living arrangements. The survey also discovered that these students had a higher likelihood of feeling a part of the neighborhood.

Chapter 3: Methodology

3.1 Research Approach:

The research strategy for creating a website that lets overseas students rent rooms combines qualitative and quantitative techniques. This strategy aims to develop a thorough understanding of the difficulties encountered by international students in locating housing and to develop a website that successfully serves their needs.

3.2 Surveys and Questionnaires:

Surveys and questionnaires were designed and distributed among international students to gather information about their experiences and preferences regarding accommodation. The surveys focused on aspects such as location preferences, budget constraints, safety concerns, and desired features in a room rental website. The responses obtained from the surveys provided valuable insights into the specific needs and expectations of the target users.

3.3Website Design and Development

Based on the insights gathered from the data collection phase, the website design and development process took place. This involved the following steps:

3.3.1 Requirements Analysis

The requirements for the room rental website were identified based on the findings from the literature review, surveys, and interviews. The specific features and functionalities that would cater to the needs of international students and homeowners were defined. These requirements served as the foundation for the design and development process.

3.3.2 Wireframing and Prototyping

Wireframes and prototypes were created to visualize the layout and user interface of the website. This involved creating low-fidelity wireframes to outline the basic structure and flow of the website, followed by high-fidelity prototypes that simulated the interactive features and user experience. The wireframes and prototypes were reviewed and refined based on feedback from potential users and stakeholders.

3.3.3 Development and Testing

The website was developed based on the finalized design and requirements. The development process included front-end and back-end implementation, database integration, and testing for functionality, usability, and responsiveness. User testing sessions were conducted to gather feedback on the website's performance, user experience, and any potential issues or improvements.

Chapter 4: Survey with data collection

4.1 Data collection

The information gathered during the process of gathering data for the creation of a website for international students renting rooms is presented in this report. This report's objective is to present an overview of the data gathering techniques used, the participants, and the most important findings. The phase of data collecting aims to learn more about the difficulties encountered by international students in locating housing and their preferences for a room rental website.

4.2 Questionnaires

Here are some questions we asked to international students through Google forms:

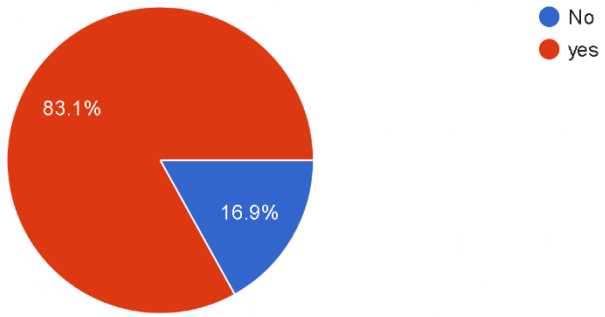
1. Have you heard about online room rental?
2. How did you hear first about the room rental website?
3. Faced problem in money frauds while booking a flat/room?

4. Have you used any other rental websites?
5. Do you have problems regarding documents.
6. What do you think is a good price for 1,2,3 BHK flat?
7. Do you face problem of third person or agent office while searching for room?
8. If you have faced problem, how?

4.3 Responses:

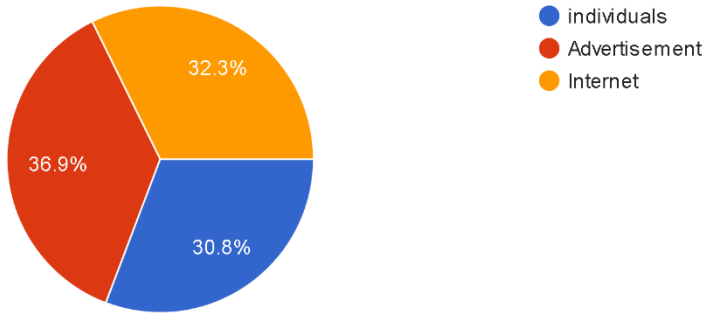
Have you heard about online room rental .

65 responses



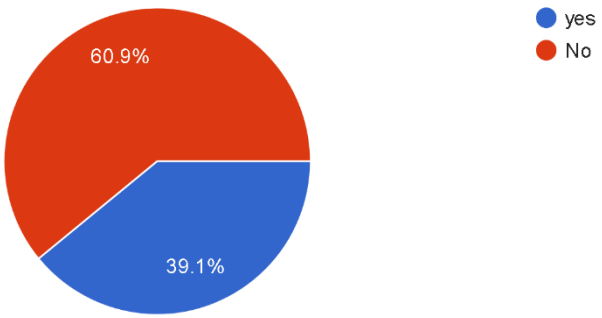
How did you hear first about the room rental website?

65 responses



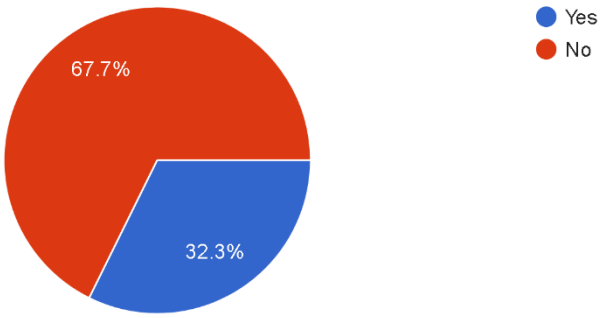
Faced problem in money frauds while booking a flat/room.

64 responses



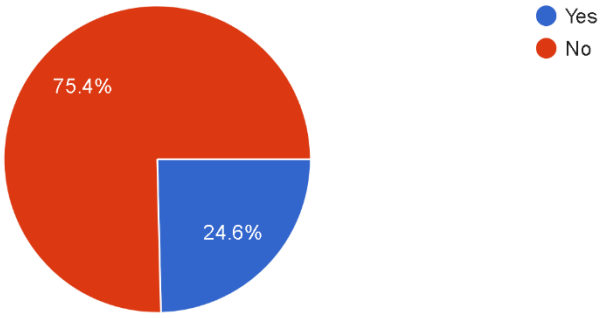
Have you used other rental website ?

65 responses



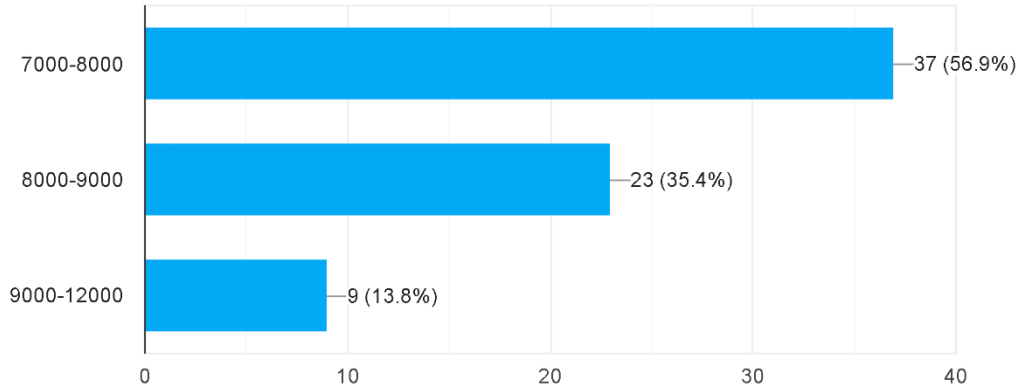
Do you have problems regarding documents.

65 responses



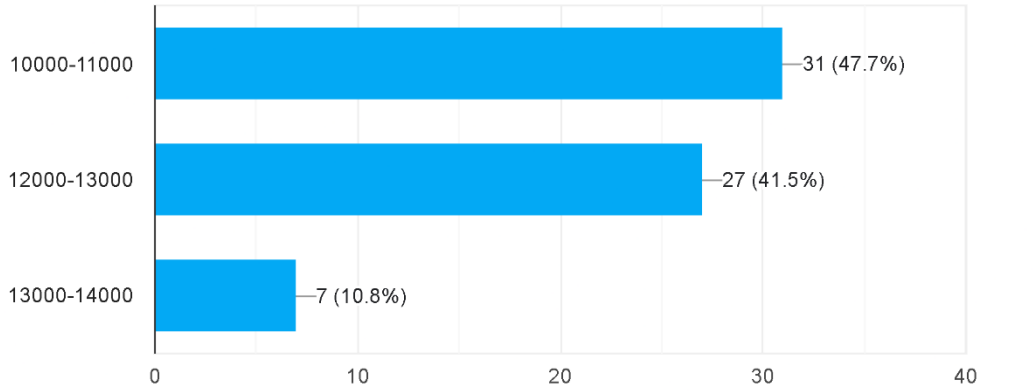
What do you think is a good price for 1 bhk flat?

65 responses



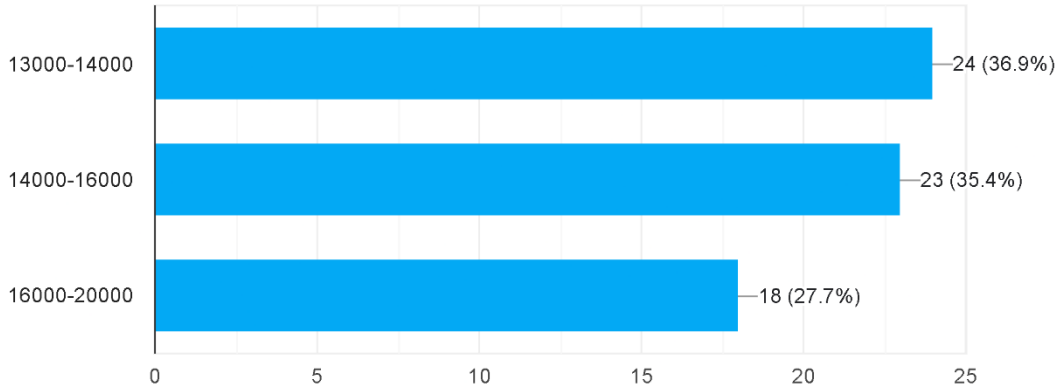
What do you think is a good price for 2 bhk flat?

65 responses

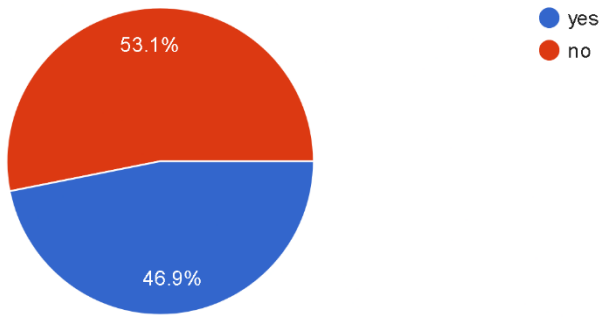


What do you think is a good price for 3 bhk flat?

65 responses



Do you face problem of third person or agent office while searching for room ?
64 responses



If you have faced problem. How?

Answers:

- The price appears high for Africans and it is tough for Africans to get flats as we are judges to be bad.
- Brokerage charge is too expensive.
- The facilities they provide.
- High brokerage charge
- found unhygienic society
- People judge us because of we are not yet earning
- Price, not good flats
- Problem to connect them
- Had problem to connect with them
- To contact and also find location
- By giving 50% of room rent charges to him as a broker charge
- They ask for bribes which is more than the rent
- High Brokerage Charges, Time taking as you have to visit person to person just to see the rooms.
- First, I tried to find a room on No broker. i got many there. when I started calling them, some had already rented others were asking for money.

- Broker took money around 8000 by only contacting and showing house one time
- Room hunting is very difficult and if we go to broker then the brokerage fee is high
- Some websites contain too many advertisements and I feel irritated.
- Documents, agreement were done but later agent told someone else already took the flat
- While we search for flat there is language barrier.

Chapter 5: Website design & implementation

5.1 Introduction:

The design and implementation of the website for international students' room rentals are covered in this chapter. It describes the procedures taken to create a functioning and user-friendly website from the defined needs and insights from the data collection phase. The design and execution process sought to solve the unique difficulties experienced by international students and offer them a productive platform for locating acceptable housing.

5.2 Front-end Development

The front-end development focused on translating the visual design into HTML, CSS, and PHP code. This included building responsive web pages that adapt to different screen sizes and devices. Attention was given to optimizing the website's performance, ensuring fast loading times and smooth interactions.

5.3 Back-end Development

The server-side functionality and database integration were created during the back-end development phase. Systems for user identification and permission were put in place to guarantee secure access to user profiles and private data. Users can browse and filter available accommodations using property listings and search features.

5.4 Testing and Iteration

Extensive testing was conducted throughout the design and implementation process to ensure the functionality, usability, and performance of the website. This involved both manual testing and automated testing techniques to identify and address any bugs, errors, or usability issues. User feedback and usability testing sessions were also conducted to gather insights and make iterative improvements to the website's design and functionality.

5.5 Conclusion

This chapter presented the design and implementation process of the room rental website for international students. By following a user-centric approach and incorporating the requirements identified during the data collection phase, the website was designed and developed to address the challenges faced by international students in finding suitable accommodation. The next chapter will focus on evaluating the usability and effectiveness of the developed website through user feedback and testing.

Chapter 7: Conclusion and future scope of project

7.1 Conclusion:

In conclusion, the development of a room rental website for foreign students has addressed the specific challenges faced by international students in finding suitable accommodation. Through the design and implementation phases, several key aspects have been achieved:

User-Centric Design: The website was designed with a user-centric approach, considering the needs, preferences, and challenges faced by foreign students. The user interface was visually appealing, intuitive, and optimized for a seamless user experience.

Comprehensive Accommodation Listings: The website provided a comprehensive platform for landlords to list their available rooms or properties for rent. This allowed international students to access a wide range of accommodation options, including information about location, rental prices, amenities, and contact details.

Advanced Search and Filtering: The website incorporated advanced search and filtering options to help international students narrow down their accommodation search based on their preferences, such as location, budget, room type, and amenities. This streamlined the search process and improved efficiency in finding suitable accommodations.

Safety and Verification Measures: Safety concerns were addressed through the implementation of safety and verification measures. These measures included verifying landlord profiles, implementing secure payment systems, and providing user reviews and ratings. By prioritizing safety, the website instilled confidence in international students when using the platform.

Multilingual Support: Recognizing the diversity of international students, the website provided multilingual support, allowing users to access the platform in their preferred language. This enhanced accessibility and ensured that language barriers did not hinder their accommodation search.

Online Community and Support: The website fostered an online community where international students could connect, seek advice, and share their experiences. This created a supportive environment and facilitated interactions between students, promoting a sense of belonging and providing additional support during their stay abroad.

Overall, the room rental website for foreign students successfully addressed the challenges of limited information, high rental costs, safety concerns, and the lack of a local network often faced by international students. By providing a user-friendly platform with comprehensive listings, advanced search features, safety measures, and community support, the website has greatly facilitated the process of finding suitable accommodation for foreign students studying abroad.

7.2 Future Scope of Website:

The room rental website for foreign students has a promising future with several potential areas of expansion and improvement. Here are some future scopes for the website:

Enhanced Localization: As the website grows and attracts users from different countries, there is an opportunity to further enhance localization efforts. This could include expanding language support to accommodate more languages commonly spoken by international students.

Integration with Student Services: The website can explore partnerships or integrations with student services and organizations to provide a more holistic experience for international students. This could include integrating with transportation services, visa assistance providers, language schools, or cultural exchange programs. By offering a comprehensive platform that goes beyond accommodation, the website can become a one-stop solution for international students' needs.

Expanded Payment Options: Offering a wider range of secure payment options, such as mobile wallets or localized payment methods, can improve convenience for international students. This can help accommodate different financial systems and preferences, making the payment process seamless and accessible for users from various countries.

Integration with Student Feedback: Incorporating a feedback system where users can rate and review their accommodation experiences can provide valuable insights for other students. This feedback can help future users make informed decisions and improve the overall quality of listed accommodations.

Expansion to New Markets: As the website gains traction and success, there is an opportunity to expand into new markets and cater to the accommodation needs of students in different countries. This can involve partnering with universities, student organizations, and local stakeholders to provide a tailored experience for international students in specific regions.

By considering these future scopes, the room rental website for foreign students can continue to evolve, meet the changing needs of international students, and establish itself as a trusted and indispensable resource for finding accommodation abroad.

Chapter 8: References

8.1 Website References

- **HousingAnywhere** (www.housinganywhere.com): A platform specifically designed for international students, offering a wide range of verified accommodation options in various cities worldwide.
- **StudyPortals** (www.studyportals.com): Provides comprehensive information about studying abroad, including guidance on accommodation options and resources for international students.
- **Erasmusu** (www.erasmusu.com): A platform focused on housing solutions for international students, particularly those participating in the Erasmus+ program. Offers a variety of housing options and resources.

- **Rent.com** (www.rent.com): A general rental website that allows users to search for apartments, houses, and rooms for rent in different locations. It provides filters to narrow down options based on specific requirements.
- **University Housing Services**: Many universities have their own housing services or departments that provide information and assistance to international students. Check the websites of specific universities you are interested in for their housing services.

8.2 Code References

- W3Schools (www.w3schools.com): A popular website offering tutorials and interactive code examples for HTML, CSS, and many other web technologies. It covers the basics as well as advanced concepts.
- Codecademy (www.codecademy.com): An online learning platform that offers interactive coding courses, including HTML and CSS. It provides a step-by-step learning experience with practical exercises
